Tadaishe Chibondo

Computer Science Student @ NUST | Python, JavaScript & Full-Stack Developer (Django, React) Building Scalable Web Apps
Harare, Harare, Zimbabwe

Summary

Full-Stack Developer | Python Specialist | Algorithmic Trading Enthusiast

I build software that solves problems at the intersection of Finance and Technology. As a Computer Science student at NUST, I focus on creating high-performance, scalable applications that bridge the gap between complex data and user-centric solutions.

My approach is rooted in extreme self-discipline and technical precision—whether I'm optimizing a trading algorithm or architecting a marketplace.

Technical Expertise & Impact:

FinTech & Automation: Engineered AresTradingBot, a Python-based desktop application for algorithmic trading on synthetic indices (Boom/Crash), integrating real-time technical analysis and trend detection.

Full-Stack Development: Architected and deployed CampusAcc, a student housing marketplace built with Django and React, streamlining the search process for off-campus accommodation.

Workflow Optimization: Developed a custom CLI automation tool (ops-cli) to streamline development environments and project management.

Current Focus:

I am currently developing Yield-Trade, an AI-driven marketplace connecting small-scale farmers to beneficiation startups. My goal is to leverage full-stack expertise (Django/React) and a growing foundation in financial analysis (CFA Level I candidate path) to build tools that drive economic efficiency.

Let's Connect:

I'm always open to discussing FinTech, OSINT, or collaborative software engineering.

Experience

Self-employed

Ops Automation CLI

September 2025 - November 2025 (3 months)

Harare, Zimbabwe

A modular CLI tool for developer productivity. Features Include automated file system organization, secure project backups (Vault), and a generic web scraper.

Pygentech

Intern

November 2024 - September 2025 (11 months)

Built and maintained websites using React, HTML/CSS, and JavaScript. Collaborated with backend developers using Django and REST APIs. Built RESTful APIs with Django Worked with databases PostgreSQL, MySQL, SQLite.

National University of Science and Technology

Projects

August 2024 - September 2025 (1 year 2 months)

Harare, Zimbabwe

Developed a full-stack web platform that enables university students to buy and sell goods within campus, reducing the need to travel to town for essentials Designed and implemented a RESTful API using Django REST Framework and integrated it with a React.js frontend for seamless real-time interaction. Built features for user authentication, product listings, image uploads, and search/filter functionality with a secure backend. Applied JWT-based authentication, responsive UI design, and database management using PostgreSQL. Improved student access to affordable goods while promoting peer-to-peer entrepreneurship across campus.

Education

National University of Science and Technology

Bachelor's degree, Computer Science · (September 2024 - September 2028)
